MISCELLANEOUS FIELD NOTES

ANW @ Hornish Cr @ F11

• arrive w/ TIC @ 1434

• snow in box, not too much, but we will clear it out

• checking time on data logger

- day and year are ok

- time is set 1408 → 1437 by ANW's watch

- change data logger int to 15 sec

* noticed that previous logging interval was zero.

*6 gave us zero values for all parameters??

checking SM setting

instead of 03:0001, I see 03:0002? maybe there

- is a "trailing sm"

- check connections in box - they all seem fine.

• swap out old SM for new

- copied program - check

- set to full ad step - check "03:0050"

*6 - still no measurements.

NO FLOW!

- need to return later ad trouble sheet!

- also there were 2 sais attached to CR box why?

I'll bring both back to the lab
