

U. S. DEPARTMENT OF THE INTERIOR
Geological Survey

Form 9-275-D
(Jan. 1988)

WATER RESOURCES DIVISION

Date 11/15 Aug 319, 19 99

MISCELLANEOUS FIELD NOTES

B2, Santa Fe

EC, MG

- reset CR 10 time to 1308
- trickle of flow present
- some ice in flume
- swapped N₂ tank (1900 psi
feed = 10 psi)
- swapped SM
- cleared ice in flume
- Stage: 8.95
- Air Temp: 3.72
- H₂O Temp: -0.16
- S.C.: 308.94
- Volts: 13.73

(*) flume has been compressed, it is no longer level on the DS end, it has been broken (DS, LHS) by ice dynamics next to the flume.

Flow is slowly increasing (probably the first day though) but is only ~ 2 4/5

↑
(0.71 cfs)
