mostly  
calm

MISCELLANEOUS FIELD NOTES

SANTAFE @ T32

PC, CT

- Santafe → always a mess
- Some leakage through River left overflow weir.
- dammed up channel upstream that flows into overflow weir in order to route all flow thru flume. This will obviously be undone at higher flows.
- batteries good / charging
- N @ 2000psi

	<u>inside</u>	<u>outside</u>	
stage	1.53	0.56	@ 1410
WT	5.65	1.0	
SL	130.3	186.0	
v	14.3	-	

Time = 0.57 @ 1404

- collected stream chem.

$Q = 1.36$
